

Fourteen years building software and twelve testing it. I started as a web developer in Caracas in 2012 and worked through every layer of a product: databases, backends in C#, PHP and Node, frontends in Angular, React and Vue. In 2014 I automated my first suite in Selenium and led a QA team, and I never stopped looking at software from the tester's side. Today I design QA processes and automation suites in TypeScript, Playwright and Cypress, bring in AI agents where they take real work off the team, and read the code when a test fails, because a developer's eye finds the defect where it actually lives.

SKILLS AND TOOLS

|                |                                                         |             |                                                       |
|----------------|---------------------------------------------------------|-------------|-------------------------------------------------------|
| Testing and QA | Playwright, Cypress, Selenium, Puppeteer, Testmo        | QA practice | Test strategy, process design, data-driven testing    |
| Languages      | TypeScript, JavaScript, Python, PHP, C#, SQL, C++, Java | Frontend    | Angular, React, Vue.js, Ionic, Tailwind, SASS, jQuery |
| Backend        | Node.js/Express, Django, .NET/VB, Laravel, Yii          | Data        | PostgreSQL, MySQL, SQL Server, migrations, modelling  |
| AI             | Claude and Claude Code agents, prompt engineering       | Tooling     | Git, Docker, Azure, Jira, Confluence, Scrum           |
| Leadership     | Team lead, mentoring, requirement planning              | Design      | Brand identity, UI design, CorelDRAW, DaVinci Resolve |

EXPERIENCE

08/2026 – 09/2026

Remote

**Senior QA Automation Engineer, Tenant Evaluation LLC**

Built and matured the QA function of a property-management platform, combining manual testing, process design and automation.

- Mapped every process of the system under test as diagrams, then defined and standardized how testing is identified, planned and tracked.
- Validated new features, enhancements and fixes, and documented defects against QA best practice.
- Developed the Playwright automation prototypes behind the team's automation strategy, using Claude for test generation.
- Contributed the QA standards and guidelines adopted across the engineering team.

130+ test cases written in the first week, with every process of the system mapped in diagrams.

Playwright · Testmo · Claude · Jira and Confluence

04/2025 – 08/2026

Medellín, remote

**Senior QA Automation Engineer, zinc.tech**

Took ownership of an existing automation project, assessed whether it could be extended at all, and architected a complete automation ecosystem from the ground up.

- Delivered the viability and extensibility assessment and the technical roadmap for a suite that could scale, then built everything that followed against it.
- Split the suite into two tracks: a data-driven one fed by existing datasets, and a general track for end-to-end functional validation.
- Built an automation control dashboard for on-demand runs of the full suite, live monitoring and system health reports.
- Designed a dynamic data generation engine that produces large datasets and bulk-loads them into the platform, so tests run against realistic volume.
- Configured AI agents with tailored documentation and guidelines to take on specific testing and development tasks.
- Analysed the internal system to trace defects across processes and data layers, and delivered the fixes that kept automated runs reliable.

700+ automated test cases covering business workflows, functional checks, APIs and third-party integration responses.

TypeScript · Vue.js · Node.js/Express · AI agents

06/2023 – 11/2025  
Medellín, Colombia

### Mid/Senior Software Developer, **Gorilla Logic**

Two and a half years across outsourced client projects and internal initiatives, growing from frontend work to full-stack delivery and leadership contributions.

- **Systech** (05/2025 – 09/2025). Custom solutions on the client's proprietary framework, plus automated test pipelines to keep the code reliable.
- **Leadership Program, internal** (11/2024 – 04/2025). Helped design and deliver leadership training for engineering teams, and facilitated workshops and mentoring sessions.
- **Trisept Solutions** (08/2023 – 11/2024). Angular and Tailwind components for a travel-plan purchase system, PowerReviews and TripAdvisor API integrations, .NET/VB backend modules, integration and unit tests, code reviews and sprint planning.

Angular · Tailwind CSS · .NET/VB · REST APIs · Automated testing · Mentoring

06/2023 – 02/2024  
via UST Global

### Senior Frontend Developer, **CDW**

In parallel with other engagements: maintained legacy pages built on .NET and jQuery, built new reporting components on RESTful APIs, handled edge cases around data corruption and user sessions, and created React proof-of-concept modules for the system's modernization.

.NET · jQuery · React · REST APIs

11/2021 – 11/2022  
Remote

### Full-Stack Developer, **CIGO Tracker**

Built planning and tracking features for a global delivery-management platform in Angular with NgRx for centralized state, and designed a notifications module for real-time component interactions. Drew the workflow diagrams, developed database migrations, maintained the legacy backend and wrote proofs of concept and technical documentation.

Angular · NgRx · TypeScript · Database migrations

01/2013 – present  
Own studio

### Founder and Full-Stack Developer, **16 Ball Creations**

My personal brand for freelance development, started with the goal of growing it into a development company. Over thirteen years it has shipped web and mobile products for clients in Venezuela and Colombia, planned, designed and built end to end, together with the brand identities around them. Selected work is listed below.

Vue · React · Ionic/Angular · WordPress · Yii2 · Graphic design

12/2018 – 01/2020  
Medellín, Colombia

### Full-Stack Developer, **Virtual Community Builders S.A.S.**

Built employment, entrepreneurship and training platforms for Medellín's digital-government initiative, and custom WordPress and BI platforms for enterprise clients such as NewStetic and CED Antioquia. Integrated AI assistants (Watson and Dialogflow) into Moodle learning platforms, led database modelling, technical documentation and Git administration, and mentored junior developers.

WordPress · Moodle · Watson/Dialogflow · BI · Mentoring

07/2018 – 12/2018  
Cali, Colombia

### Freelance Software Developer, **Vennex Group S.A.S.**

Optimized code and SQL scripts for the CUP CMS platform, ran data cleanup, migration and restructuring for the government client INCIVA, guided junior developers and helped plan the team's work.

SQL · Data migration · CMS

11/2015 – 03/2018  
Caracas, Venezuela

### Software Development Lead, **OENS Ingeniería**

Led a development team building web-based industrial control systems and ERP tools, integrated deep into production lines: requirement planning, UX, database design and team management.

- **SCPC**, a concrete plant production control system, in two major versions (2015 and 2017).
- **SICAP** for LafargeHolcim.
- The first **Modularity ERP**, the seed of the multi-company platform I still develop today.
- Corporate sites for OENS and ZWCad Costa Rica, plus Microsoft Office 365 consulting.

Team leadership · Requirement planning · UX · Database design

01/2016 – 11/2016  
Remote

### Full-Stack Developer, **Buenacausa.org**

Developed the platform on Yii Framework 1.1.

PHP · Yii 1.1

06/2014 – 01/2016  
Caracas, Venezuela

### QA Automation Lead, **M5 Team**

My first role in QA and test automation, for a year and a half. Automated tests with Selenium on top of the Acumatica ERP framework, led the QA team by managing its work and organizing deliveries, and tested and helped build Acumatica modules such as Service Management. Also consulted on the company's own website.

Selenium · Acumatica ERP · Team lead · Functional and regression testing

01/2012 – 09/2014  
Caracas, Venezuela

### Web Developer, **Güep Group, MirrorHouse Games and 4Geeks**

Where it started. At Güep Group (05/2012 – 09/2014), websites for artists and professionals across industries: Créditos Internacionales, Romina, Pavitas, Reinaldo Díaz, Giovanni Bojanini and Domingo Mondongo. At 4Geeks (01/2012 – 05/2012), landing pages and corporate sites, among them Poligrass Venezuela and Connectly. A one-month stint at MirrorHouse Games (07/2014) on SummerFarm, a browser game that was never released.

PHP · JavaScript · MySQL · WordPress

## SELECTED PROJECTS

|                |                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2015 – present | <b>Modularity ERP.</b> My own product: a multi-company ERP for small businesses that are not run by IT professionals. Born as an ERP for a concrete plant at OENS and grown version by version into a platform that adapts to cafés, auto repair shops, salons and clinics by switching modules on and off. Angular 20 frontend, Django backend, PostgreSQL, Playwright suites, developed with Claude Code agents. |
| 2020 – present | <b>PsicoFormando.</b> A psychology outreach project I make with my family: I produce and edit the videos, design the graphics, built the website and run the content strategy. YouTube, Instagram and TikTok, plus psicoformando.com.                                                                                                                                                                              |
| 2020 – 2021    | <b>TradingCore S.A.S., Emprende Fácil Mujer and HorusInvestmenth.</b> An education platform for TradingCore, and two React web applications: one for a female-entrepreneurship initiative built during the pandemic, and an investment platform.                                                                                                                                                                   |
| 2020           | <b>Es De Todos, CED Antioquia and Puto King Tattoo Art.</b> A WordPress platform with an Ionic 5 application on a Yii2 backend; a custom backend and WordPress work for CED Antioquia; and the full package for a tattoo studio: logo, WordPress site and photography.                                                                                                                                             |
| 2019           | <b>Socialgrafo.</b> A business intelligence and data management platform in Vue.js for Corprefer S.A.S.                                                                                                                                                                                                                                                                                                            |
| 2013 – 2015    | <b>Venezuelan clients and brand work.</b> Custom development for Los Javelin, Agendas Empresariales E.S. de Venezuela and Promofactory de Venezuela. Logos for Puto King Tattoo Art, PsicoFormando and 16 Ball Creations, and book covers for LS Innovaciones, Transportes La Represa and AreCar Corporación.                                                                                                      |

## EDUCATION

### Licenciatura en Computación (Computer Science), Computer Graphics

Universidad Central de Venezuela, 2007 – 2013. 3D rendering, C++, OpenGL and OpenCL. Teaching assistant for five academic terms (2009 – 2011).

## LANGUAGES

Spanish, native. English, full professional (C2, EFSET 73/100). German, Russian and Ukrainian, basic.

## CERTIFICATIONS

- Advanced Automation Test in Cypress — Test Automation University, 2021
- Introduction to Cypress — Test Automation University, 2021
- Ionic/Angular Development — Udemy, 2020
- EFSET 73/100, C2 Proficient — EF Standard English Test, 2019

## BEYOND THE CODE

Bass player and singer in Neural, a metal band. Audiovisual production and graphic design, the craft behind PsicoFormando. Reading, mostly on personal development.
